Acknowledgments

The 2002 lowa Youth Survey (IYS) would never have been completed without the assistance and support of several organizations and individuals. First, we would like to thank all the district superintendents, principals, teachers, counselors, facilitators, parents and students for an incredible effort. The survey participants went from 85,426 in 1999 to almost 97,000 in 2002, an increase of nearly 12,000 students. This shift was due to the addition of non-public schools and the continued group effort in each district, which resulted in a higher level of public school participation than in 1999.

We are especially grateful for the assistance provided by the Iowa Consortium for Substance Abuse Research, the author of the 1999 Iowa Youth Survey Reports. In an effort to make the data from the 1999 and 2002 Iowa Youth Surveys comparable to the maximum degree possible, we have drawn extensively on the prior work done by the Consortium in terms of data management and analyses, as well as formatting of the report. Also, much of the narrative in this report borrows heavily from the Iowa Consortium's Youth Survey Reports, produced in 1999. The Consortium also provided invaluable technical assistance relating to our analyses of the data. Hopefully, this report is viewed as carrying forward the quality of the Consortium's previous work. Any mistakes or other problems in the 2002 report, however, are due to its authors, not the Consortium.

The other individuals and organizations that were involved in this collaborative effort are too numerous to mention in detail, but they included individuals from state and local government agencies, youth organizations, youth service providers, and private enterprise. Each and everyone who participated provided invaluable input into the product of those efforts, the 2002 IYS reports.

Thank you all for being a part of the 2002 collection and analyses of data on Iowa's youth.

Important Information About Your Report

What Can I Do With These Data

General purpose. The 2002 Iowa Youth Survey (IYS) Area Education Agency (AEA) reports were designed to help area education agencies identify youth development-related needs, develop relevant programs, and assess the outcomes of those programs. They can also help you assess the strengths and weaknesses of your area schools, families, and communities from the student's perspective.

Community Collaboration. The lowa Department of Education (IDOE) and other agencies involved in this study emphasize the crucial role of school-community collaboration in enhancing life for lowa's youth and enabling them to become successful adults. The data in these reports will help area education agencies plan effective service delivery to local school districts and community agencies and organizations to develop more effective needs-driven programs.

In addition, you will find the data in these reports to be valuable for your needs assessment for AEA accreditation.

Overview and Comparison to Previous Surveys

Survey scope. The 2002 IYS is the 10th in a series of youth surveys that have been completed every three years since 1975. The 1999 and 2002 surveys differ from previous years in both the procedures used to implement the survey and the students that were asked to participate. Previous surveys were given to approximately one-third of lowa's public school districts and a sample of their 6th, 8th, 10th and 12th grades. Starting with the 1999 IYS, participation was sought from *all* public school districts and *all* students in grades 6, 8 and 11, as well as 14-18 year-old students in alternative programs. These changes make it possible to provide youth development-related data for each participating school, as well as for each county in which participating students reside. They also make it more feasible to use IYS results to assess the outcome of community and school youth development programs. The changes do, however, restrict direct comparisons with surveys prior to 1999, to grades 6 and 8, and to those schools that participated in those surveys.

Starting with the 2002 IYS, participation was also sought from all non-public schools in the state, in addition to all of the public school districts. It was believed that by including all lowa students in the 6th, 8th and 11th grades, the survey results would more accurately reflect the attitudes and perceptions of all lowa students in those grades, not just those attending public schools. However, except for the four districts mentioned below, data from the non-public schools have not been included in the survey data for the school districts in which the non-public schools are located. These data have been excluded for

two primary reasons. First, the non-public schools' level of participation was extremely low, with only 27.5% of the students enrolled in the 6th, 8th and 11th grades completing a usable questionnaire. With such a low level of participation, the aggregate data could not be considered as reflecting the behaviors, perceptions, etc., of all lowa youths enrolled in those grades. Second, if the non-public school data had been included in the appropriate public school district data, valid comparisons could not have been made by the individual public school districts between the 1999 and 2002 IYS data. It is hoped that, in future lowa Youth Surveys, the level of participation by non-public schools will increase to the point where it can be aggregated with the public school district data to produce a valid portrayal of all lowa youth in the school grades selected for examination.

At a minimum, at least some of the survey questionnaires were completed in 349 of lowa's 371 public school districts, (94.1%) and in 49 of the 178 non-public schools, (27.5%) with some combination of students enrolled in the 6th, 8th and/or 11th grades. A total of 96,971 students across the state completed the IYS, with each county represented by at least 170 students, except Wayne County. Due to procedural errors in obtaining the survey forms and distributing the forms to the student-participants, the data from non-public schools in four public school districts were irretrievably commingled with the public school data, thus it is not possible to calculate the actual number of public school students and non-public school students who completed surveys.

Survey content. The 2002 IYS questionnaire includes questions about the students' behaviors and attitudes/beliefs, as well as their perceptions of their peer, family, school and neighborhood/community environments. Prior research has shown that each of these environments plays a significant role in positive youth development. Selection of specific survey questions was based on a combination of: 1) analysis of data collected in previous lowa Youth Surveys; 2) a literature review of the established youth development models, especially those that enjoy some acceptance in lowa; and 3) discussion sessions with youth development professionals (community service providers, school district personnel and academics).

The general content of the questions included in the 2002 IYS is similar to that of previous surveys. Most of the items are relevant to the constructs on which previous IYS were based. All questions and responses from the 1999 IYS were utilized without modification, and several new questions added. Among the new additions are questions regarding participation in certain prohibited activities on school property, the student's perceived career path upon finishing high school, and job and job seeking skills developed in school.

The appropriateness of any comparison between the 1999 and 2002 surveys, and surveys from previous years, must be considered on a question-by-question basis. Trend analyses for the most part should be considered exploratory at best. If comparisons are made, the 1999 and 2002 reports may make your district *appear* to be significantly different, for better or worse, from the reports generated by previous surveys. This appearance may be due to differences in question wording and the representativeness of the sample rather than to actual changes in lowa's youth.

Data Editing/Cleaning

Validity checks. The 2002 IYS questionnaire, like its predecessors, is a self-administered questionnaire that relies on each student's ability to read (a few students may have had the questionnaire read to them) and honestly respond to each question. Such self-reported behaviors and attitudes/beliefs are always subject to falsification, either intentional (denial, boasting or just mischievousness) or unintentional (mistakenly filling in the wrong circle, misreading, etc.). Each questionnaire was reviewed for evidence that would support a claim that the respondent had little or no intention of making an honest effort to complete the 2002 IYS. This evidence consisted of such things as inconsistent responses (e.g., indicating use of substances on one question while denying ever using them on another), improbable responses (e.g., using every illegal drug every day), and patterned responses (answering a series of questions exactly the same way). There were a total of 27 such validity checks made. A total of 122 questionnaires failed 5 or more of the 27 validity checks, and these questionnaires were deleted from the data files used to generate the 2002 IYS reports. This left a total of 96,849 usable questionnaires.

Other cleaning. In addition to the validity checks described above, some individual questions in the 2002 IYS questionnaire were found to have responses that were improbable or erroneous. These questions included county of residence and age.

<u>County of residence</u>. When we compared county of residence to the county in which the student's school district was located, we found students from nearly every school district across the state reporting that they resided in lowa County. It was evident that there were several students confusing their county of residence with their state of residence. There were similar problems involving county and city confusions (e.g., Des Moines). There were also several students who provided a response that could not be used to clearly identify a county of residence.

Because of these problems, the county of residence responses were modified in the following two ways: 1) The county in which the school district's administrative office was located served as the focal county for that district. Any response to the county of residence question that was not the focal county, or one of the counties that shared a geographic border with that county, was converted to the county where the majority of the students from that school district claimed as their county of residence. 2) If a student provided no useable response for county of residence, the county that the majority of students from that school district claimed as their county of residence was assigned to those students. While these modifications will still allow for some students being assigned to the wrong county of residence and even a few who might have been taken out of the correct county and put into an incorrect one, the modified version of county of residence is much more likely to contain fewer errors than the unedited county of residence responses.

<u>Age.</u> Some responses to the age question in the 2002 IYS were also modified. There were several instances where only one digit of the age response was reported. If the missing digit was the first digit, and the second digit was consistent with an age that was appropriate to the respondent's reported grade in school, the missing first digit was replaced with a "1". The same procedure was used to convert a "0" to a "1" if the age response was "08" or less. *For example*, if a student reported that he/she was in the 8th

grade and reported an age of 03 (0 for the first digit and 3 for the second digit), the age response was change to 13 (1 for the first digit and 3 for the second digit). After the above changes were made, any student who reported an age of less than 10, or more than 19, was converted to missing data for the age question response.

The responses to all other questions remain unchanged from those actually provided by the students. In every instance, it is important to remember that the responses recorded are each student's *perceptions*, not necessarily the actual state of the environment they are describing. Still, a case can be made that students almost surely behave *in response to their perception* of what is occurring, and thus it is their perception that is most important.

Profile of Level of Participation in Your AEA

The proportion of students in grades 6, 8 and 11 completing surveys varied widely in several schools. As a result, the AEA reports are based only on those districts that completed 75% or more of <u>each</u> of these grades. This eliminates the combining of schools that completed a large proportion of one particular grade with schools that completed only a small proportion of that same grade. Given that 11th graders are much more likely to be substance users than either 6th or 8th graders, any significant discrepancy between the proportion of 11th grade students and other grades who took part in the 2002 IYS would produce a distorted total estimate for that AEA (i.e., a larger proportion of 11th graders and a smaller proportion of 6th and 8th graders would produce an artificially high total substance use estimate in that AEA). The school districts from your AEA that are included in this report are listed on page 46.

Table 1 below provides a profile of the extent of participation by the students in your AEA in the 2002 IYS. The first column is the number of students that, according to IDOE, were enrolled in your AEA in each grade. The second column is the number of students in the qualifying school districts (completed 75% or more of grades 6, 8 and 11) from your AEA that were enrolled in grades 6, 8 and 11. The third column is the number of students from these schools who reported they were in each of those grades and completed a usable IYS questionnaire. The fourth column is the percent of students completing a usable IYS questionnaire by each grade (number completed divided by total number enrolled in your AEA).

Table 1: Level of Participation in Your AEA

Grade	AEA Total Number Enrolled	AEA Qualifying Number Enrolled	Number Completing Qualifying IYS	Percentage Completing IYS
6	4,988	2,907	2,645	53%
8	4,903	2,862	2,626	54%
11	4,786	2,657	2,265	47%

In general, the higher the percentage completing an IYS, the more likely the students in your sample are representative of all of the 6th, 8th and 11th grade students enrolled in your AEA.

Confidentiality-Related Data Restrictions

Protecting the confidentiality of the students who participated in the 2002 IYS is of primary importance. While there is no way for an individual student to be connected with his or her particular responses, there are circumstances in which all students, and in turn each individual, may be connected to a particular behavior or attitude. As well, there are circumstances that increase the likelihood of someone making inferences about particular students from the data. If, for example, all 11th graders in a school district reported that they drank alcohol, essentially every 11th grade student can be identified as a drinker. Further, if 96% of the students reported drinking, someone could assume that any given student is a drinker and have a 96 in 100 chance of being right.

Management of confidentiality issues. To address potential confidentiality problems, certain questions and accompanying responses were identified as sensitive (potentially harmful or embarrassing). For example, it is not likely that anyone would be harmed if all the students in an AEA responded that they did not use cocaine, but it might be harmful or embarrassing if all the students reported they drank alcohol.

For this subset of questions, any time less than 10% of the students do not respond in the *least* sensitive manner, the actual percents will not be reported. Instead, either a "~" or "#" will appear in that column for each response. The "~" will indicate that *less than* 10% of the students reported a particular response or set of responses. The "#" will indicate that 90% or more of the students reported a particular response or set of responses. For example, if more than 90% of the students responded that they drank 1-2 times, 2-3 times, etc., the symbol "#" will appear in those response cells. In the remaining response cell, the symbol "~" will appear indicating that less than 10% of the students reported that they drank 0 times.

Specific Report Content

Principal components of report. The actual data provided in your 2002 IYS AEA report include the responses to every question that appears in the 2002 questionnaire. There are essentially eight columns on each page of the report. The symbol "—" appearing in any column indicates data that are either not reportable or not applicable. Also, "0%" appearing in any column represents *anything less than 0.5* (including 0, or none).

The **first column** includes an abbreviated version of the question (followed in parentheses by its section and question number in the 2002 IYS questionnaire), a

"response" row for each response, and the "% who answered question" row. This last row in each set of responses is the percent of your students who responded to that question (number of students that responded to the question, i.e., did not leave it blank or provided an unreadable response, divided by the number of your students who completed a useable 2002 IYS questionnaire). A low percentage in this row would indicate that several of your students did not, for one reason or another, answer that question. In general, the higher this percentage, the more likely the responses in the remaining rows are representative of the students in your AEA. All the percents in the "response" rows are based on the number of students who answered that question. Students who left the question blank or provided an unreadable response are not included.

The **second column**, titled "**AEA**", includes the percent of students who reported each of the responses (number of all the students from the qualifying school districts in your AEA reporting each response divided by the number of all the students who answered that question and completed a usable questionnaire from your AEA).

The **next three columns**, titled **"By Grade"**, are percents based on all of the qualifying students in your AEA that answered the question and reported that they were in either grade 6, 8 or 11.

To obtain an <u>estimate of the total number</u> of students in each grade that responded in a particular way to any question, you can change the percent reported for that response in the appropriate column to a decimal and multiply that decimal by the enrollment numbers provided in Table 1 on page five. For example, if, in the "grade 11" column, 50% of the 11th grade students who completed the IYS reported they never gamble, you would multiply .50 times the total 11th grade enrollment number reported in Table 1. The resulting product of the multiplication would be an *estimate* of the total number of 11th graders in your AEA who reported they never gamble.

The **next two columns**, titled "**By Gender**", are percents based on the responses of all the qualifying students in your AEA who answered that question and reported that they were either male or female.

The **final column** in the 2002 IYS AEA reports, titled **"75% Goal State,"** includes percentages that can be used to make comparisons with the "AEA" column. In order to minimize a potential biasing problem with respect to these comparisons, the last column also includes percents that are based *only* on those schools that completed 75% or more for *each* of their 6th, 8th and 11th grades. A list of the school districts that met the 75% goal criteria begins on page 47.

Substance use prevalence rates. Page 50 of the data portion of your 2002 IYS AEA report includes a summary that focuses on ever and current (30 days) alcohol, tobacco and other drug (ATOD) use prevalence rates.

<u>Tobacco</u>. The "any tobacco use-current" prevalence rate includes all those students who indicated that they had used a tobacco product in the past 30 days: cigarettes, cigars or smokeless. These students include those who reported that they smoked at least part of a cigarette, or on some days smoking cigarettes or cigars, or used smokeless tobacco in the last 30 days. The respective IYS section and question numbers are B-12, B24-25 and B32. The "any tobacco use-ever" prevalence rate

includes all those students who reported any of the following: that they smoked at least part of a cigarette in the last 30 days; that they had ever tried to quit smoking cigarettes; an age when they started smoking cigarettes; some days of smoking cigarettes or cigars in the last 30 days; or that they used smokeless tobacco (B12-14, B24-25 and B32).

The "cigarette use-current" prevalence rate includes those students who reported they smoked at least part of one cigarette in the last 30 days, or reported some days of smoking cigarettes in the last 30 days (B12 and B24). The "cigarette use-ever" prevalence rate includes those students who reported that they smoked at least part of one cigarette in the last 30 days, that they had ever tried to quit smoking cigarettes, reported an age when they started smoking cigarettes, or reported some days of smoking cigarettes in the last 30 days. The respective IYS section and question numbers are: B12-14 and B24. The "cigar use-current" prevalence rate includes those students who reported some days of smoking cigars in the last 30 days (B25). No "cigar use-ever" prevalence rate is available. The "smokeless tobacco use-current" prevalence rate includes those students who reported using smokeless tobacco in the last 30 days (B32), and the "ever" prevalence rate includes those who reported that they had never used smokeless tobacco (B32).

Alcohol. The "any alcohol use—current" prevalence rate includes those students who had reported taking at least one drink (beer, wine, or liquor) in the last 30 days, or reported having 5 or more drinks on at least one day in the last 30 days. The section and questions numbers from the 2002 IYS questionnaire that are respectively associated with these criteria are: B26 and B22. The "any alcohol use-ever" prevalence rate includes those students who reported an age that they started drinking, or reported drinking 5 or more drinks on at least one day in the last 30 days, or had at least one drink in the last 30 days. The section and question numbers respectively associated with these criteria are: B15, B22 and B26.

<u>Drugs.</u> The "any drug use-current" prevalence rate includes those students who reported some use of a drug (marijuana, inhalant, methamphetamine, cocaine, amphetamine other than meth, steroid, or other illegal drug) in the past 30 days. The section and question numbers associated with these criteria are B27-31 and B33-34. The "any drug use-ever" prevalence rate includes all those students who indicated that they had ever used any of these drugs. These students include those who reported either an age for first using any one of these drugs, some use of these drugs in the last 30 days, or some ever use of steroids or other illegal drugs (B16-20, B27-31 and B33-34). The "current" prevalence rate for each type of drug includes those students who reported some use of that drug in the last 30 days (B27-31 and B33-34). The "ever" prevalence rate for each type of drug includes those students who reported either an age for first using that drug (B16-20), use of that drug in the last 30 days (B27-31) or some use ever of steroids or other illegal drugs (B33-34).

Some Cautions Regarding Interpretation

Anyone who uses the percents that are provided in the 2002 IYS reports should be aware of the following cautions. First, when the percents are based on a small number of responding students, a change in the response of only one or two students would

have a very large impact on the percents reported. *For example*, if 10 of 15 11th grade students reported they used alcohol, the prevalence rate (percent of alcohol users) would be 67%. However, if only two more students would have reported not drinking, the prevalence rate would have dropped to 53% (8 divided by 15). *In general, percentages based on fewer than 50 students should be viewed with some caution*, and it should be understood that these percents can vary quite dramatically simply because they are based on a small number of respondents.

Second, unless every school district in your AEA collected data from every student, there is always the possibility that the students who did complete the 2002 IYS are not representative of your total student body. In general, the higher the proportion of students participating, the more likely your sample is representative and without bias. Still, only the school districts know exactly why some of the students did not participate, and only school district personnel can be fully aware of any biases that those non-participating students might introduce into the AEA report percentages.

Finally, the response percentages that are reported for any one question might total to slightly less or more than 100%. This is due to rounding, not an error in the reported percentages.

Other Reports That Are Available

State, county and school district. School district reports were sent to the district superintendents and certain non-public school principals. Following the distribution of AEA reports, state and county reports will be made available to the public as they are completed. These reports will be different in some respects from the AEA reports, but area education agencies will be able to use these reports to help integrate their AEA-specific data with county and state level aggregates. These reports will be available on the 2002 IYS website, www.state.ia.us/dhr/cjjp/ythsurvey.html, as well as the websites of other state agencies funding this study.

Planning regions. Later in the year, additional reports will be released that are based on other regional planning categories. These will include the lowa Department of Public Health's substance abuse and prevention planning regions, lowa Department of Human Services regions, DECAT regions and judicial districts. These reports will be available on the 2002 IYS website, www.state.ia.us/dhr/cjjp/ythsurvey.html, as will county and state reports. These reports will also be accessible on the websites of other state agencies funding this study.

Other reports. The Departments of Public Health, Education, Workforce Development and CJJP are working together to develop other reports that can help local and state planning efforts. One such report is being designed to combine the findings from various survey questions that are similarly related to the result areas (e.g. safe and supportive schools, communities and families) of the lowa Youth Development Result Framework. Please go to the IYS website periodically to check on the availability of such other reports.

Where Do We Go From Here

Long term. Our goal is for the 2002 IYS to be replicated in two or three year intervals with continuous improvements. This year's survey has been a learning experience for all parties involved, and with the knowledge gained we expect subsequent surveys to be even more successful. Your comments and suggestions have been, and will continue to be, invaluable planning and implementation resources.

Targeted improvements. The lowa Youth Survey is a work in progress, and to further that progress we hope to make the following improvements: 1) Persuade every public school district and every non-public school to participate in subsequent surveys; 2) Increase the percentage of students participating, with target percentages for designated grades reaching 85%, with the ideal being a full census (100%). Many of the reporting issues regarding potential biases and comparability will diminish as the number of participating students approaches a full census. 3) Develop a questionnaire that might be more appropriate to 4th, 5th and 6th grade levels.

If You Have Questions

It was not possible to explain in detail every procedure used to compile these reports. If you require a more detailed description of procedures mentioned here or have general questions, please feel free to contact CJJP at dhr.cjjp@dhr.state.ia.us. While we have limited resources, we will make every effort to promptly respond to your requests.

Part I of this report contains information about the students' attitudes.

attitudes about self
